LOOKING FOR A POSITION

Front-end (React)

HARD SKILLS

- React/Redux
- JavaScript
- HTML5
- CSS3 (Scss)
- Shopify
- Git
- Figma
- English level B1

ABOUT MYSELF

Hi, I'm a front-end developer. I have experience in creating individual modules and not large web pages of varying complexity in pure JS, as well as in React - SPA. I'm responsible, communicative, detail-oriented and team-working person. My goal is to achieve great success in IT, develop my skills and become better. I usually prefer to spend my free time learning new technologies and improving my English. I'm looking for new career opportunities and ready to relocate.

WORK EXAMPLES

Freelance experience:

- Create a multilingual landing page with responsive design for a company in Lithuania.

In this project I used such technologies as:

Html, Css, JavaScript and Php. I used php library to send data from contact form to company's email.

- <https://profystone.ru>

I developed a landing page with a responsive design. In this project I used such technologies as:

Html, Scss, JavaScript and Php. I used php library to send data from the contact form to telegram.

For the image carousel, I used Slider Swiper JavaScript library and Google reCAPTCHA to protect email from spam.

- <https://brickstone.by>

A landing page for Belarusian company. I created this project together with my team partner. My task was to create a contact form and site footer with responsive behavior. Technology stack I used in this project is: Html, Css, JavaScript and Php.

Pet projects:

- **<https://fitnesslanding.netlify.app>**

Landing page with responsive design. Used such technologies as: Html, Scss, JavaScript, SVG animation.

- **<https://react-marketplace-app.netlify.app>**

React e-commerce SPA. Technologies stack:

React, React-router-dom v5, Context API, and functional components.

React hooks: useState, useEffect, useContext. For image carousel I used component from Ant Design for React. Responsive page.

- **<https://search-github-react-app.netlify.app>**

Responsive React SPA page with information about GitHub user and his repository.

Technologies: React, react hooks (useState, useEffect), functional components. Get users data from Github API. I used react-paginate to create server side pagination.

- **<https://my-todo-list-react-redux.netlify.app>**

Responsive React SPA.

Technologies: React, react-Redux react hooks (useState, useEffect), functional components, localStorage.
